

## Cloud Account 2 Factor Authentication

### 2-Factor Authentication

2-Factor Authentication allows you to tie a mobile phone to your account. Each time you log in, you will receive a code to verify your login for added security.

To enable 2FA, head to the Settings tab of your Proto Cloud account. Then click on the Security Tab.

Then toggle on 2-Factor Authentication.

**IMPORTANT:** Please make sure to update your Live Beam Kit and the Live Beam App to the latest version before enabling 2-Factor Authentication for your account! If you are on an older version of the Live Beam App or Live Beam Kit, you may be unable to log in while 2FA is enabled.
